 [github.com/NiceSlice](https://github.com/NiceSlice)

I'm a software engineer with a preference to work on projects that seek to address social and environmental issues. I'm curious, precise in my work and a quick study. I always strive to improve my abilities as a listener and a communicator. I'm drawn to opportunities to learn, apply my skills and connect with awesome people along the way!

---

### WORK EXPERIENCE

#### Opvia

London, UK

2023.06 → 2023.10.

*Product engineer*

I worked in a full-stack role with additional responsibilities concerning the product - in the sense of making decisions about the functionality and design to best address customer needs, closely collaborating with the customer success team and attending frequent meetings with customers to stay informed about their experience.

My accomplishments:

- Released a major feature expanding document review functionality within our product
- Successfully handled a major migration and backend refactor to allow for implementation of an upcoming feature
- Updated the main layout on our platform

I received feedback that I appear to be the one in my team who takes on the more challenging tasks.

#### Source.ag

Amsterdam, the Netherlands

2022.04 → 2023.05.

*Full-stack software engineer*

Some of my tasks and assumed responsibilities were:

- Planning production releases, helping the Product team with communications to customers
- Participating in interviews with software engineering candidates
- Onboarding new hires, being their go-to person in the team, making sure they are supported to do their best work

- Taking charge of our main frontend while our lead frontend engineer was on paternity leave for two months
- Taking on-call shifts where I handled production incidents + answered internal requests
- Being able to frequently jump between different codebases/technologies while continuing to deliver, I got positive feedback about my flexibility in this sense

There was a high degree of independence required from me, frequent context switching, I was pushed outside of my comfort zone and constantly had to prioritise. It was a great learning experience and I loved the challenge!

### Intellegens

Zagreb, Croatia

2021.09. → 2021.12.

*Full-stack software engineer*

I independently worked on a project using .NET and Angular frameworks while being mentored by a senior engineer. I learned a lot in a short span of time in this environment and the experience I gained here was very useful going forward. My contract was for 3 months and I decided not to extend it because I wanted to move countries, which wouldn't be possible with this company.

### Global Talent Coaching

remote

2021.03. → 2021.11.

*Front-end freelancer*

It was a great opportunity to work on my own on a small-scale project that was comfortably within my technical skill set, communicating directly with a client. I designed and built an interactive part of the client's promotional website. It was an on-and-off cooperation over the course of the year.

### Ecree

remote

2020.01. → 2020.04.

*Front-end freelancer*

I was hired as a freelancer to handle some basic front-end tasks regarding website maintenance. Such as debugging, implementing simple features, updating website design and others.

---

## EDUCATION

### Codeworks

London, UK

2020.

*Software Engineering and Computer Science Bootcamp*

### Reactor Studio

Zagreb, Croatia

2019.

*Front-end development internship*

---

## HOBBIES & INTERESTS

I like to go to the theatre to see musicals and plays.  
When I don't feel like going out I cosy up with a  
book or play around with game dev.  
I love learning about different cultures and  
languages.

## LANGUAGES

English – fluent  
Croatian – native  
Spanish – intermediate  
Mandarin – beginner
